SUMMARY

Computer Science undergraduate passionate about Artificial Intelligence, Software Development and building real-world technology solutions. Experienced in developing scalable applications and AI-based projects through internships, hackathons and collaborative engineering projects.

EDUCATION

MIT ADT UNIVERSITY
Bachelor of Technology
Computer Science Technology
Cumulative CGPA: 8.43*

Pune, MH
2023-2027

WORK EXPERIENCE

INNOBYTES (Erfinden Technologies Pvt. Ltd), Pimpri Chinchwad.
Development Intern

Pune, MH
June-Nov2025

Project 1- Bizgrowth

- Developed web application modules using React.js frontend and Node.js + Express.js backend.
- Designed and integrated REST APIs for seamless frontend-backend data communication.
- Worked with Firebase database for authentication, data storage, and user management.

Project 2- Innohubs

- Assisted in building responsive web application components using React.js and modern UI technologies.
- Supported backend integration using Node.js, Express.js, and REST API services. Also contributed to database connectivity, testing, and performance optimization of application modules.

TECHNICAL SKILLS

- Languages: Python, Java, C++, JavaScript.
- Frameworks: React.js, Node.js, Express.js, Bootstrap, Flask, FastAPI.
- AI/ML: Computer vision, LLM Integration, NLP, RAG, Hugging Face Transformers, TensorFlow.
- Databases & Tools: MySQL Workbench, No SQL (MongoDB), Postgre SQL, Firebase, Git, Github.
- CS Fundamentals: DSA, Operating system, Computer networks, DBMS, Software engineering.

PROJECTS

AI based CCTV Surveillance System for Maha Kumbh Mela

- Developed a real-time AI surveillance system using OpenCV and YOLO to detect violence, kidnapping-like movements, and abnormal crowd behavior from CCTV feeds.
- Built a Flask-based backend and alert dashboard generating instant, location-tagged alerts for centralized command-center monitoring. Designed a scalable, software-only solution leveraging existing CCTV infrastructure to improve public safety at large-scale events like Kumbh Mela.

AI & IoT-Based Aeroponics System

- Developed an AI and IoT-driven aeroponics system for urban farming, achieving up to 95% water savings by delivering nutrient mist directly to plant roots without soil.
- Built an end-to-end web platform using Node.js backend and React (TypeScript) frontend to monitor real-time sensor data (temperature, humidity, air quality) and automate nutrient misting. Integrated an AI assistant (LLM via Ollama) to analyze sensor data, detect plant stress/anomalies, and provide actionable plant-care insights, supporting climate-smart and sustainable agriculture.

HACKATHONS

- Stood in Top 5 from 1004 Teams in Indradhanu International Grand Challenge Finale organized by PCCOE.
- Participated in Bhartiya Antariksh Hackathon, VIT PUNE, UNESCO Youth Hackathon 2025.
